Follow Up:

Urgent Priority.

Rod-

It was good talking with you last week. In response to our conversation, and based on your request, I've attached a brief write-up on the Pasco Landfill project. The write-up summarizes the current status of the additional interim actions and subsidence investigation at Zone A. Teresita and I plan to visit the site on May 15th for a meeting with the IWAG representatives and their subcontractors. The surface geophysical (EM Conductivity) survey work at Zone A should be occurring that day. Contact me if you have any questions or need additional information.

Sincerely,

Chuck Gruenenfelder, LG/LHG
